SUMMARY

Enthusiastic about learning and exploring Artificial Intelligence, Machine Learning, and Deep Learning, with a strong interest in gaining deeper knowledge in AI technologies and intelligent systems. Have hands-on experience with Python, React Native, and SQL, with the ability to develop mobile apps and work with databases. Continuously learning and improving technical skills to build modern, scalable, and user-friendly applications.

TECHNICAL SKILLS :

- Python
- React Native
- SQL
- Git/GitHub

CERTIFICATE :

DeepLearning.AI - Supervised Machine Learning: Regression and Classification

TOOLS PROFICIENCY :

VS Code, ChatGPT, Claude, Canva, GitHub, Jupyter Notebook, MS Office

PROJECTS :

Smart City Overhead Traffic Monitoring and Congestion Analysis Using Computer Vision (FYP) :

- Pakistani city roads are overloaded with no system to monitor, count or analyze traffic congestion in real time.
- Custom dataset collected and fine tuned on YOLOv8, React Native frontend, FastAPI backend connection, and SQL for live data storage and records.
- Overhead cameras detect and count every vehicle in real time, feeding live congestion data to a centralized dashboard for smarter city decisions.

DICOM : Digital Imaging and Communications in Medicine

- We can't get direct images and process them from DICOM files.
- Image reading and displaying, and saving to the directory, ready to process using the DICOM Library.

Garden Management :

- This mini project utilizes React Native for the mobile app frontend with JavaScript, while the backend is developed using ASP.NET Web API for API creation and MySQL for data storage.

EDUCATION

Islamabad, Pakistan **01/09/2017 – 16/10/2020**

INTERMEDIATE Punjab Board of Technical Education, Lahore, Pakistan
(CTTI) CONSTRUCTION TECHNOLOGY TRAINING INSTITUTE

Rawalpindi, Pakistan **13/02/2023 – CURRENT**

BACHELORS OF COMPUTER SCIENCE
PMAS-Arid Agriculture University, Rawalpindi
